

Road surface cold planers

BG Series

OLIVIER

OLIVIER GROUP is the exclusive dealer for

 **ZOOMLION**

Bg Series Road Surface Cold Planers

In 2002, with painstaking effort, Zoomlion launched the BG2000 road surface cold planer, which surpassed the former one and has been well accepted and appraised by the customers. Zoomlion's road surface cold planer is sold in many countries and districts such as: Taiwan, Ukraine and Tanzania and so on, and its market share ranks first in the domestic industrial market.

With its advanced equipment, top quality and high reliability, Zoomlion's road surface cold planer provides guarantee for the quality of your construction. This equipment is ideal for road repair and highway maintenance.

Considerate Ergonomic Design

1. Stairs and armrest on both sides of the machine are convenient for the operator to get on and off the machine.
2. 2 sets of push-buttons are located symmetrically on both sides of the machine for convenient operation.
3. Due to the air-compression system of the engine and special tools, the cutting tools can be quickly and conveniently replaced, thus lowering the amount of work of the operator.

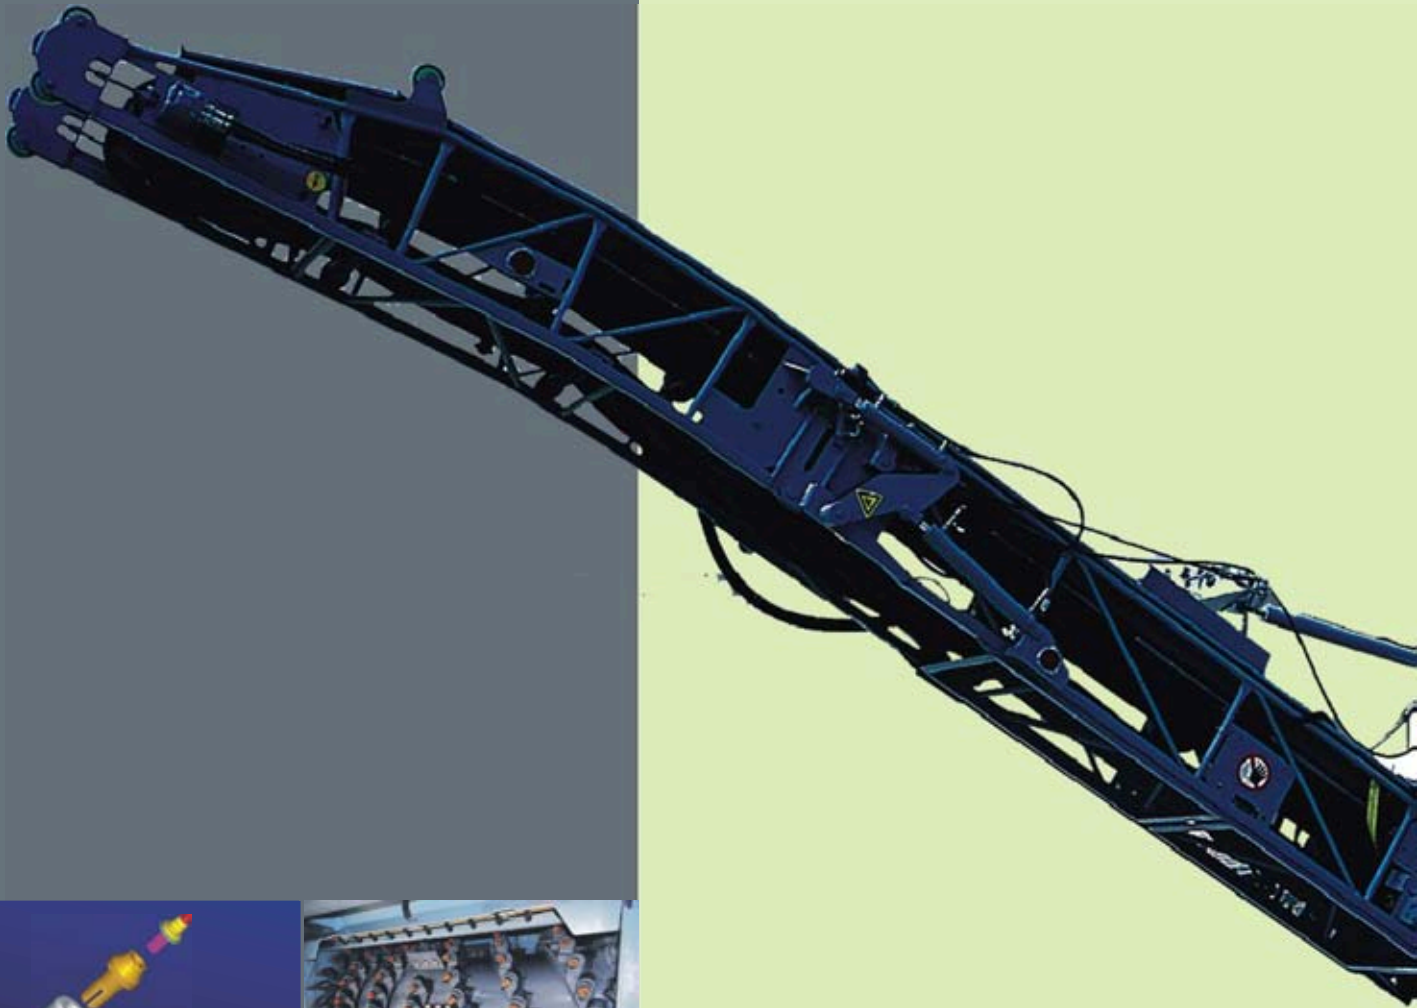

Considerate ergonomic design

Considerate ergonomic design

High Efficiency

1. Milling drum is driven mechanically with a high transmission efficiency.
2. With automatic power control, the output power can be reasonably distributed, thus ensuring the optimal efficiency of the machine.
3. 3-dimensional designing software optimizes the cutting angles and lowers the cutting obstacles.

Optimized cutting angle

Energy-saving and Environment-friendly

1. The advanced electrojet diesel engine lowers fuel consumption. (BG1000 exception)
2. The emissions of the engine conform to EURO-II standards and EPA-II standards. (off-road)
3. The low-pressure sprinkling system avoids dust effectively.

Sprinkling system

Electrical diesel engine

Control System

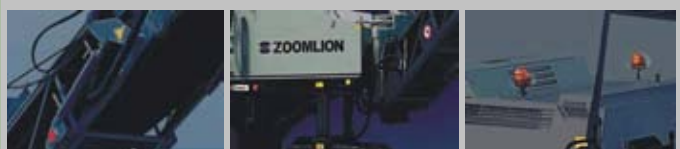

1. Electro-liquid proportion control realizes the stepless speed change.
2. Automatic levelling system for an intelligent control of the milling depth.
3. The specific microprocessor makes working more reliable and more accurate.
4. CAN bus-mastering with its simple structure improves the anti-interference performance, thus providing more reliability and making checks and maintenance more convenient.

Safety

1. All safety symbols are clearly indicated.
2. Siren, safety-light, working light and head lamp with magnetic pedestal ensure that the machine can be operated under all weather conditions.
3. Improper operation is prevented by the logistic interlock function of the electric control system.
4. In case of an emergency the machine can be stopped safely by pushing down the emergency buttons.
